

Response Mobile App

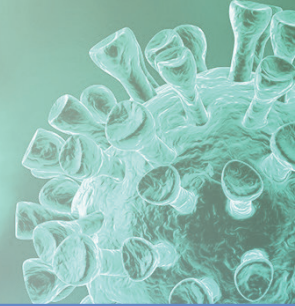

COVIDClear™ is the mobile app symptom attestation solution for employers to assess and track the COVID-19 status of their workforce. By answering a brief series of symptom screening questions, mobile users can affirm if they are COVID-19 symptom free or select which symptoms they are currently experiencing.

Helping Bend the Curve

The COVID-19 pandemic has created a “new normal” for managing large-scale infectious disease as well as the management of populations seeking to successfully return to normative activities. The ability to safely and confidently transition from rigid social-distancing to in-person work or public routine activities requires an assurance that employees or visitors entering a facility can attest to being free of symptoms associated with the COVID-19 virus.

In addition to supporting the attestation process, COVIDClear tracks user work locations to determine infection “hotspots” on your campus or environment. COVIDClear is a critical resource in helping healthcare workers protect their patients, co-workers, themselves and their families as they confront the COVID-19 pandemic in their hospitals and care delivery environments.

Staff and Patient Symptom Attestation

Quickly assess and visually demonstrate your COVID-19 risk level

-  Self-Assessment questions determine three levels of COVID-19 risk
-  Confirms symptom observations and tracks attestation history
-  Ensures staff readiness for workforce environment
-  Prompts for symptoms confirmation every 24 hours
-  Integrated into COVID-19 Response Product Series
-  Customized to your specific screening and tracking process
-  Integrate with third-party verification services

9:41 COVID-19 Attestation
Completion of this form is required prior to every shift.
